

Build the next generation of intelligent apps with Agentic DevOps

As app complexity grows, developers face mounting challenges – and new opportunities

Building AI requires:

-  A mindset shift from building apps based on procedural, deterministic logic to apps that are probabilistic
-  Robust security and governance controls to protect against emerging threats and manage AI usage

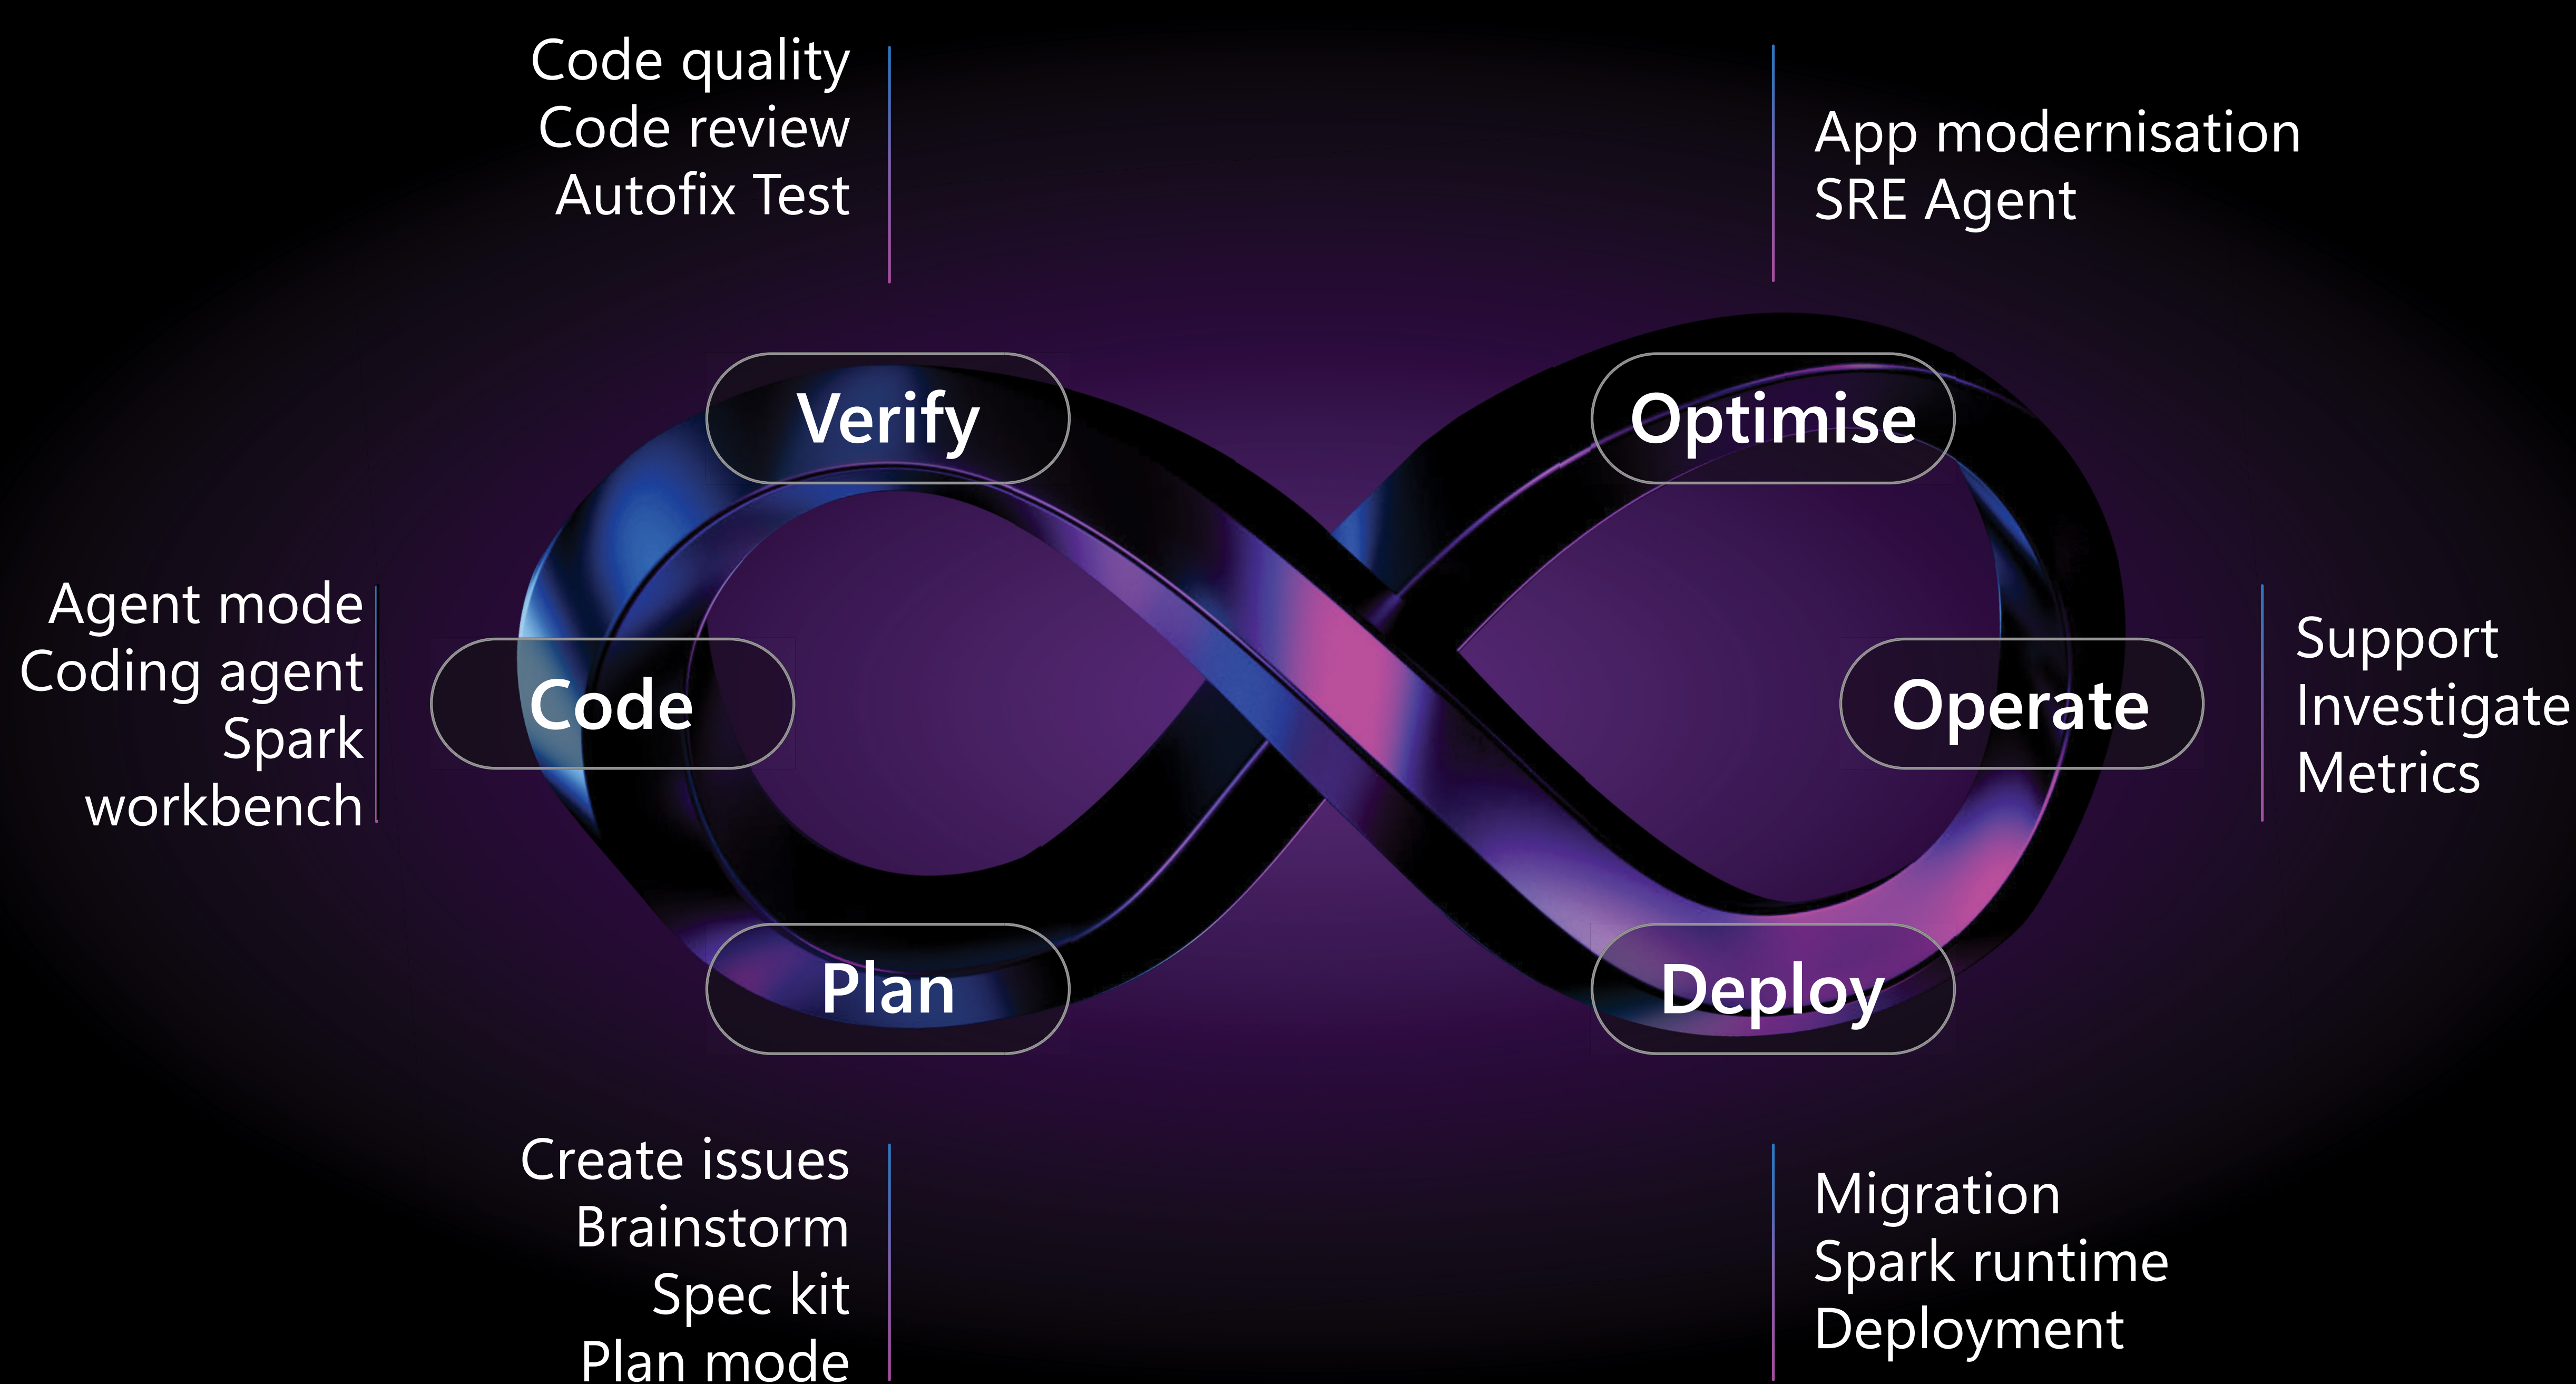

Building with AI delivers:

-  An enhanced, AI-native experience that frees developers to focus on innovation, not repetition
-  Agentic workflows that span the entire software lifecycle to help improve app quality and resilience

AI agents are ushering in a new era of DevOps evolution

AI-powered agents operating as members of your dev and ops teams, automating, optimising and accelerating every stage of the software lifecycle

Build AI with AI

Unlocking the future of AI-powered app development with end-to-end tools delivered via a deeply integrated AI platform

With decades of developer experience, developers are in Microsoft's DNA. As AI continues to transform software development, we are committed to supporting developers with an integrated platform for AI innovation.

Confidently manage agents at scale
with comprehensive security, and governance controls for developers and admins alike
