Microsoft Power Platform

Simplify Your Tech Stack for App Modernization with Microsoft Power Platform

Technology leaders in organizations are often tasked with finding new solutions that support employee effectiveness and deliver innovative customer experiences. Historically, these tasks required organizations to invest in siloed software-as-a-service point solutions. However, a shift to solutions that simplify tech stacks and integration effort is underway.

91%

of Chief Technology Officers saw technical debt as their biggest challenge going into 2024.[1]

84%

of software buyers would prefer to purchase one tool to solve business problems rather than multiple products.[2]

Power Platform reduces technical debt and complexity

As you look at your current investments and develop an app-modernization strategy, we can help you identify improvement opportunities with Power Platform. As an end-to-end development platform that includes apps, automations, pages, and agents, you can gradually replace or enhance legacy systems and drive business value on Power Platform.

Break down data silos

Improve connectivity with a built-in data platform that takes care of business logic, security, and compliance.

Connect to any data source

Choose from more than 1,400 connectors or build your own to connect to any data source with ease.

Create solutions from your data

Generate immersive, responsive apps, intricate automations, business portals, and agents by taking advantage of a blend of low-code and pro-code tooling.

Businesses also get the added benefit of Power Platform being built on the Microsoft Cloud and the integration of generative AI and Microsoft Copilot capabilities.

20%

Time savings on maintaining integrations and data connectors[3]

29%

Information workers reported that Copilot assistance enabled them to fill out forms 29% faster, and 95% of respondents preferred it over manual entry.[4]

50%

Microsoft Power Apps enables developers to reduce app development time by 50%.[5]

Take the first step in bringing your data together in one solution and streamlining how you bring experiences to market by working with us to deploy Power Platform.
